

Clean Technologies for Businesses on the Move

ARE YOU ECO-READY™?

LANDITECHNOLOGIES.COM

Your partner for sustainable mobility solutions

At Landi Technologies, we're committed to helping you meet your sustainability goals through forward-thinking, eco-ready solutions. Whether you need a single component or a fully integrated strategy, we're here to support you every step of the way.

Proudly based in California and backed by over 70 years of global expertise through our parent company, Landi Renzo, we specialize in advanced, eco-friendly technologies for commercial vehicles and OEMs. From fuel system integration to infrastructure development, our work is built around enabling cleaner, more efficient transportation.

Our team brings deep technical knowledge and real-world experience to every challenge—delivering innovative solutions that reduce environmental impact and improve long-term performance.

Let's build a cleaner, more sustainable future together.

Explore how our technologies can help you lead the shift to low- and zero-emission mobility.

Our global expertise →

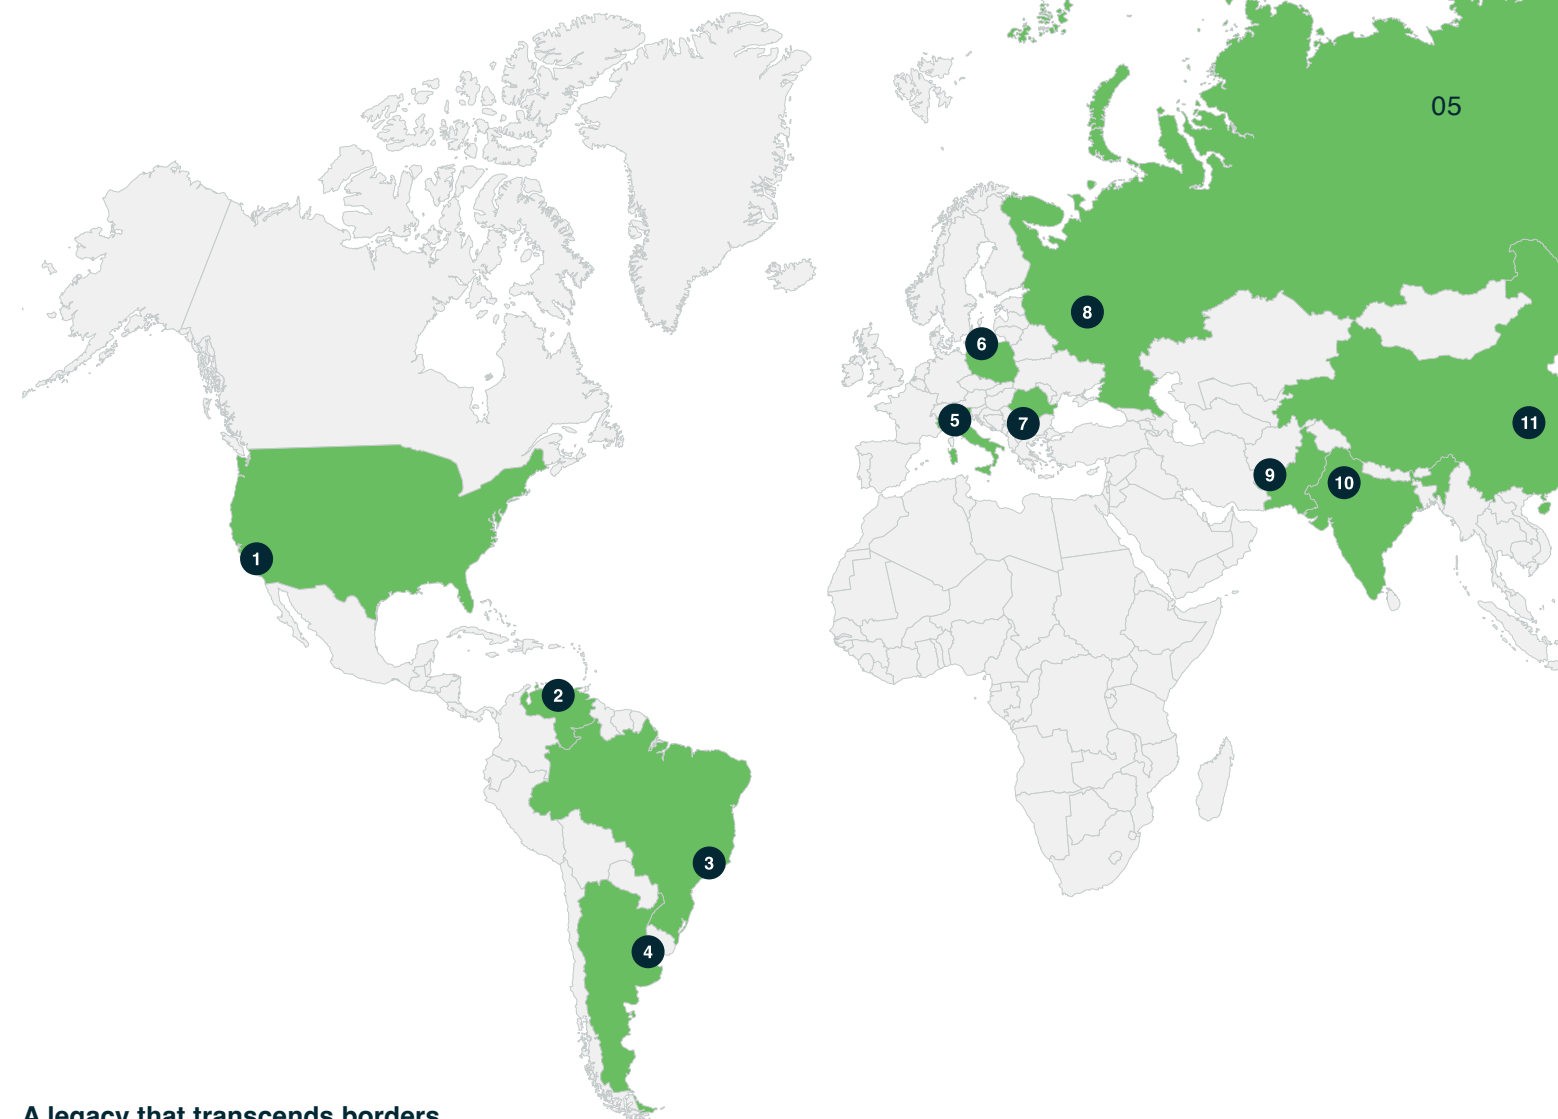

US innovation and insight, global expertise and leadership

Driving the future of ecomobility

At Landi, communication, strong relationships, and trust form the cornerstone of our partnerships. We know that collaboration drives success, which is why we prioritize open, transparent dialogue with every client. Our commitment to building long-term relationships ensures we don't just meet expectations — we exceed them, delivering tailored solutions built around each customer's unique needs.

With over 70 years of industry experience, Landi boasts a rich heritage as a pioneer in alternative fuel systems. Our legacy of innovation and cutting-edge solutions has positioned us as global leaders in sustainable mobility — with a presence in over 50 countries and recognition worldwide for our expertise, reliability, and commitment to sustainability.

A legacy that transcends borders

Based in California, Landi is strategically located at the heart of sustainability and clean technology innovation. Our presence in this forward-thinking hub enables us to stay ahead of emerging trends and regulations — ensuring we deliver advanced, future-ready solutions that meet the evolving needs of commercial fleets and OEMs.

As a professional support partner, Landi helps companies navigate the complexities of clean mobility with expert guidance from concept to execution. We offer end-to-end services across a range of technologies, helping our clients meet their sustainability goals while adapting to a rapidly changing market.

Our team is equipped to work with any eco-friendly fuel type, including Renewable Natural Gas (RNG), Propane (LPG), Hydrogen (H₂), and Battery Electric Vehicles (BEV). Whether you're integrating a single system or rethinking your entire fleet strategy, Landi has the tools, experience, and expertise to make it happen.

With a focus on driving clean miles, we empower businesses to reduce emissions, cut their environmental impact, and enhance their position as socially responsible leaders in the mobility space.

Why you can trust Landi to deliver

And why so many before you have

Through our unwavering commitment to excellence and innovation, Landi has distinguished itself as a leader in the sustainable mobility sector. But you don't have to take our word for it.

We've built a diverse portfolio of satisfied clients across the commercial fleet and OEM sectors, forging enduring partnerships based on trust and mutual success. With our client-centric approach and dedicated Account Management model, we have nurtured long-term relationships grounded in reliability and transparency.

We pride ourselves on delivering exceptional value and exceeding expectations, as evidenced by our consistently high client satisfaction scores. With a client NPS score of over 85% in the past six months, we continue to demonstrate our unwavering commitment to quality and service excellence. Furthermore, our impressive client retention rate of over 80% underscores the enduring trust and satisfaction our clients have in our solutions.

Our capabilities and technological expertise

Ecomobility solutions built to support businesses navigating a rapidly shifting mobility landscape

Landi offers a comprehensive suite of solutions designed to revolutionize the commercial mobility space through industry-leading sustainable practices and bleeding-edge technology.

Technology sits at the core of our business, where we integrate the latest advancements in green tech, develop robust infrastructure, and provide seamless vehicle integrations to enable leading mobility companies to propel their business into the future of ecomobility. Through our innovative solutions and forward-thinking strategies, we pave the way for a greener, more efficient transportation ecosystem.

Our end-to-end offering provides a comprehensive mix to support a range of business types and sizes—from nimble start-ups looking to establish in the market, to established incumbents seeking to shift their operations to keep up with a changing landscape and optimize their ecomobility operations.

Landi's commitment to excellence also ensures that our clients stay ahead of the curve. We continually push the boundaries to design and develop new product innovations, pioneering the industry and shaping the future of ecomobility technology.

Our support solutions provide businesses with on-demand parts and upgrades, with tailored training programs designed to enhance operational efficiency and skill sets within teams.

From expert evaluations to solving intricate challenges, we empower businesses to make informed decisions and unlock new opportunities that help them thrive in a new eco-driven age.

Service Areas

Technology Development

- Software
- Hardware
- Vehicle Integrations
- Infrastructure

Managed Services

- Vehicle & Component Service
- Upgrades & Parts
- Inventory Management
- Training & Up-Skilling

Strategy & Ecomobility Consulting

- Health Check & Assessments
- Ecomobility Solutions Strategy
- Consultations

Product Development & Innovation

- Product Design & Development
- Custom Solutions
- Pilot & Test

Our capabilities and technological expertise

A comprehensive ecomobility solution offering

—Vehicle Integration

Delivering integrated, regulatory-ready fuel systems tailored to commercial platforms with full support for CARB and EPA certification.

—Components Manufacturing

Designing, manufacturing, and distributing precision-engineered components that power both low- and zero-emission vehicle technologies at scale.

—Service

Going beyond repair, providing fix and upgrade options, extensive parts inventory, and tailored training programs to enhance operational efficiency and skill sets in the ecomobility sector.

—Innovation

Pioneering product development, crafting custom solutions, and conducting comprehensive technology pilots and tests to set new benchmarks in ecomobility technology.

—Infrastructure

Revolutionizing green energy infrastructure from ground to grid, to build tomorrow's green economy, today.

Vehicle Integration

Advanced ecomobility vehicle solutions

Seamless integration of advanced low-emission systems

Landi Technologies delivers turnkey vehicle integration services that enable OEMs and fleet operators to bring clean mobility platforms to life—faster, smarter, and fully certified. With deep expertise in alternative fuel systems and decades of experience working directly with commercial vehicle platforms, our team supports the end-to-end design, fitment, testing, and validation of ecomobility systems including CNG, RNG, LPG, FCEV, and BEV.

We go beyond physical installation—guiding clients through performance optimization, compliance engineering, and certification processes to meet state and federal regulations. Whether launching a new vehicle platform or adapting an existing system, we provide the technical and regulatory capabilities needed to get to market with confidence.

Engineered for performance and compliance

Integrated vehicle systems that meet regulatory demands and exceed operational expectations

Specification & Application Engineering

We support clients from the earliest stages, helping define vehicle specifications and engineering requirements tailored to platform constraints, performance goals, and emissions targets.

Our team provides input across packaging, range requirements, and compliance strategies to ensure your program is built on a solid technical foundation.

Fuel System Integration & Installation

Landi delivers complete fuel system integration—from mechanical and electrical fitment to layout and component configuration.

With certified technicians and extensive hands-on experience, we ensure seamless installation, validated to meet safety, durability, and emissions standards.

Upgrades & Certification Support

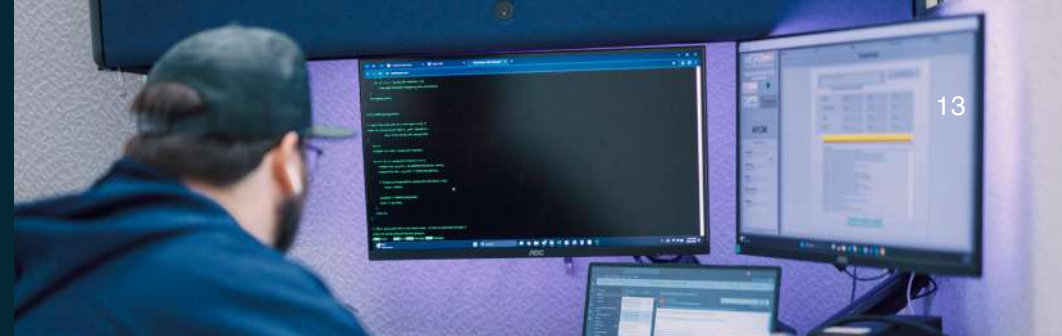

Whether adapting an existing platform or launching a new one, we help optimize performance while meeting regulatory expectations.

Our team provides full-service support for CARB and EPA certification, including emissions testing, technical documentation, and coordination with agency contacts to secure required approvals.

Parts & Training

We provide a robust inventory of Landi and non-Landi components to support ongoing maintenance, alongside tailored training programs to equip your team with the knowledge to service systems confidently.

Our training sessions can be delivered onsite or at our California HQ, helping teams scale with quality and consistency.

BENEFITS

End-to-end integration support

CARB & EPA compliance

Fleet uptime assurance

Platform-specific engineering

Components Manufacturing

Precision-built components for a cleaner tomorrow

Built to power the future of clean transportation

At Landi Technologies, component manufacturing is not an add-on — it's at the core of what we do. With over 70 years of design and production expertise, we develop and deliver precision-engineered components that power some of the world's most advanced clean mobility platforms.

From low-emission systems to next-generation zero-emission technologies, our components are trusted by global OEMs and commercial vehicle manufacturers for their performance, durability, and regulatory readiness. With more than one million units produced annually, Landi delivers the scale, reliability, and innovation needed to support a global shift toward sustainable mobility.

Precision-engineered for ecomobility

Delivering the components that drive the clean transportation industry forward

Legacy Components for Alternative Fuels

We design and manufacture CNG, RNG, LPG, and hydrogen components trusted by leading OEMs worldwide. These legacy solutions continue to deliver high performance and cost efficiency across a broad range of vehicle platforms.

Zero Emission System Components

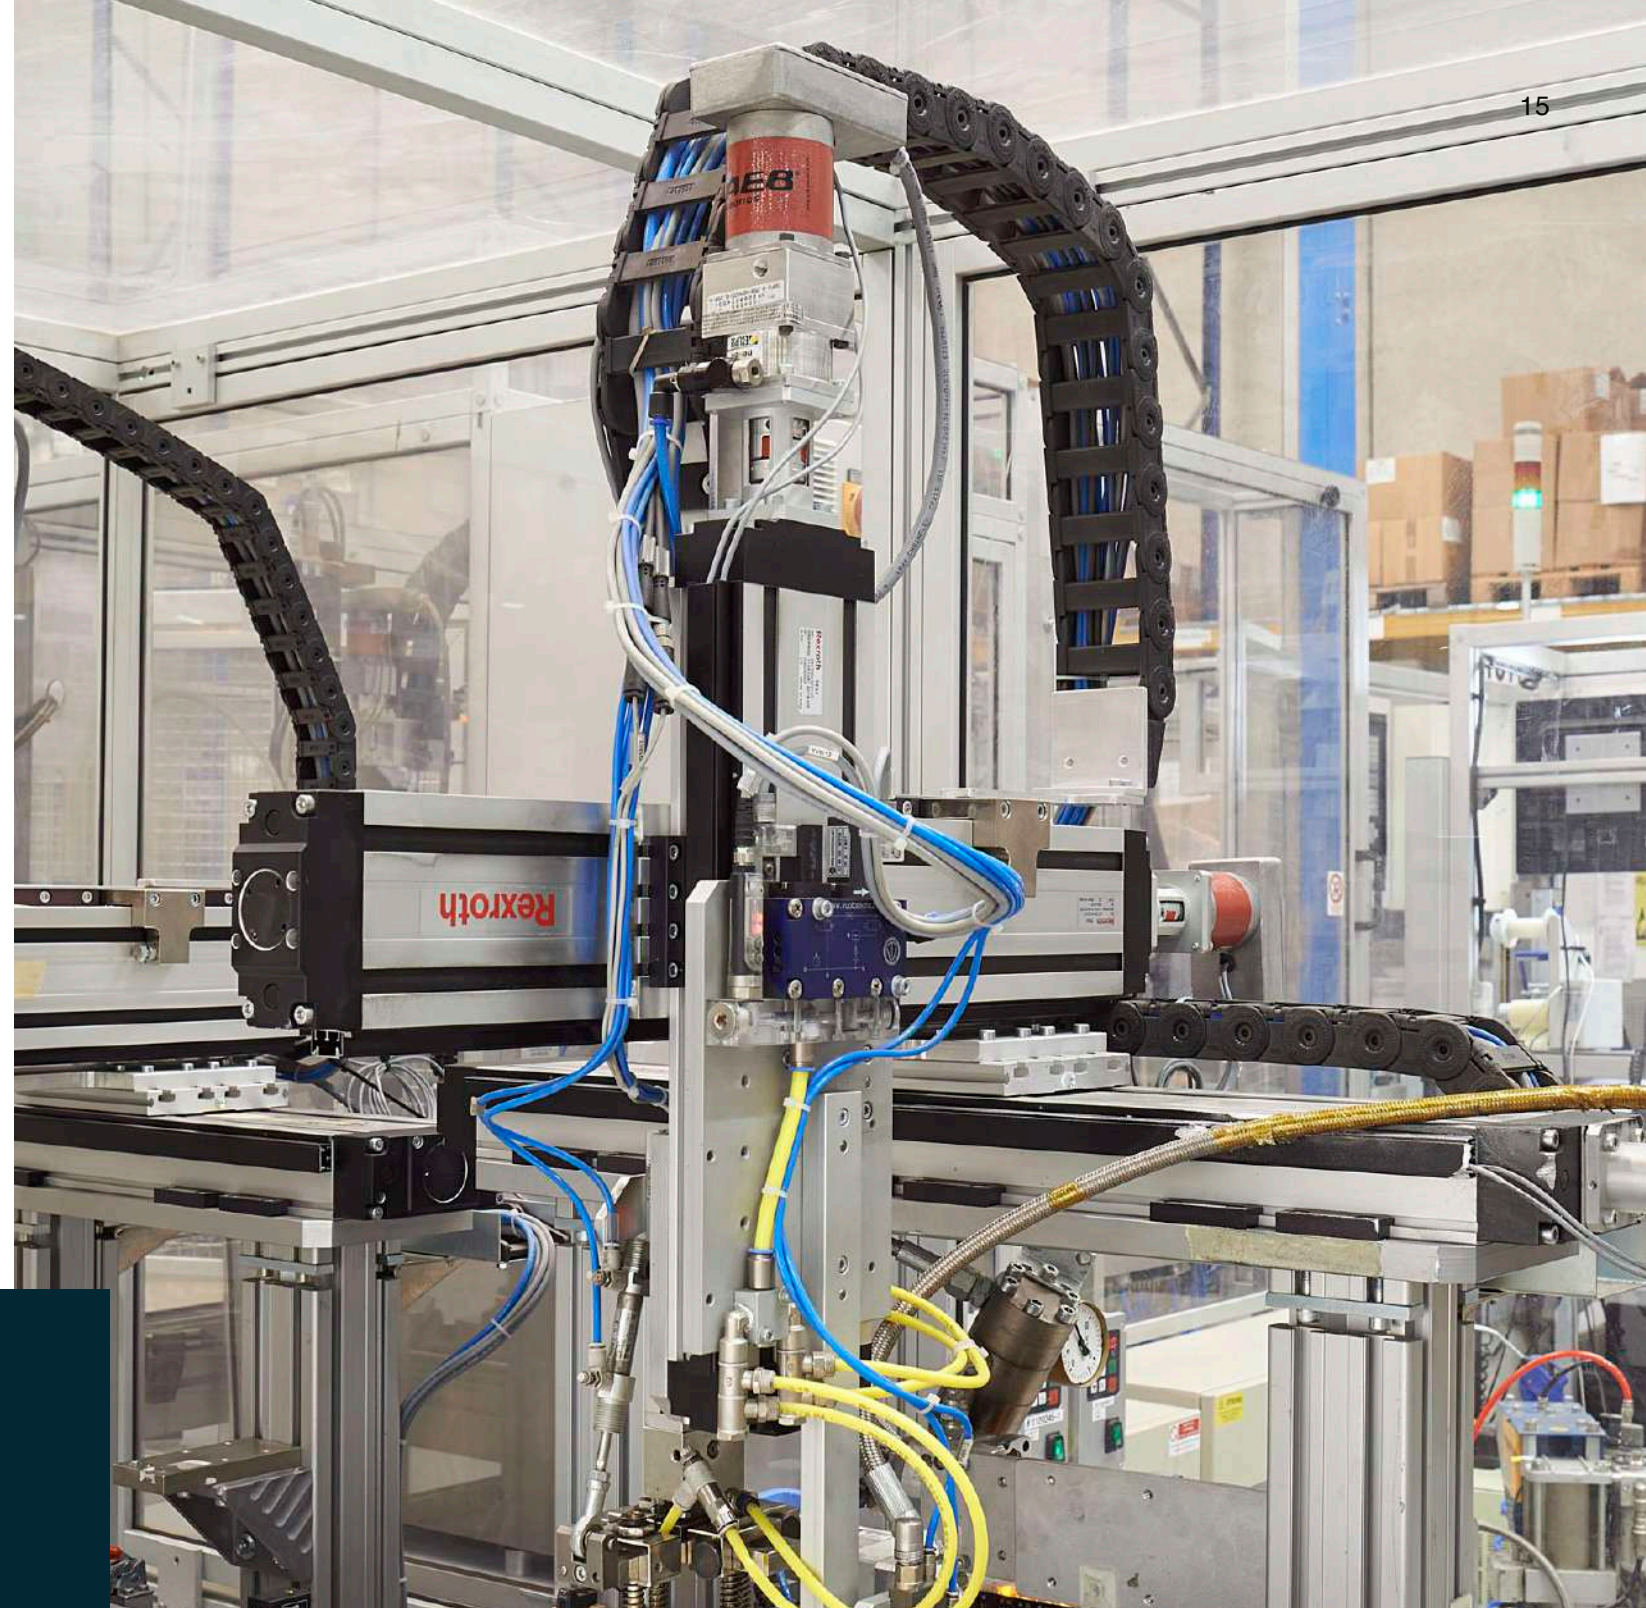

Landi has expanded its capabilities to include components designed specifically for zero-emission applications, supporting emerging technologies including BEVs and fuel cell systems with a focus on integration, durability, and thermal management.

OEM-Grade Quality & Validation

Every Landi component is rigorously tested and validated to meet the high safety and compliance standards of the commercial vehicle market. Our systems align with key regulatory frameworks and OEM quality benchmarks globally.

Global Production & Distribution

With established facilities and a worldwide supply chain, Landi can support volume production and distribution needs at scale. Our manufacturing operations are designed for responsiveness, ensuring availability and speed-to-market across regions.

Service

Comprehensive sustainable services

Tailored services ensuring optimal fleet performance

Landi's managed eco-services encompass a wide range of offerings designed to maintain and enhance the performance of commercial vehicles. From regular vehicle and component services to upgrades, parts provision, inventory management, and training, our services offer comprehensive support to ensure that every aspect of fleet management is covered and commercial vehicles can operate at their peak efficiency and reliability.

We believe that the true value of service lies beyond maintenance alone; it's about empowering our clients with the resources and knowledge to excel in their industry. We understand that well-maintained vehicles are crucial for business success, which is why we offer tailored solutions to meet the specific needs of each client, with training and up-skilling programs designed to further ensure they can stay ahead in the rapidly evolving world of ecomobility.

BENEFITS

Precision engineering and testing

Solutions for low and zero emissions

OEM-trusted product performance

Scalable manufacturing at volume

Eco-services that elevate vehicle performance

Maintaining and enhancing the operational efficiency and sustainability of commercial vehicles

Vehicle & Component Service

Landi provides comprehensive ecomobility maintenance and repair services for commercial vehicles and their components.

Our expert technicians are equipped with decades of experience to handle a wide range of service needs, from routine check-ups to complex repairs.

Upgrades & Parts

We provide high-quality parts and upgrade services that enhance vehicle performance and improve sustainability of existing vehicles.

So whether it's retrofitting with the latest technology or replacing worn components, our solutions are designed to keep your vehicles up-to-date and running smoothly.

Inventory Management

Efficient inventory management is crucial for minimizing service delays and ensuring the availability of essential parts.

Landi's systemized approach ensures that critical ecomobility parts and components are always in stock, reducing wait times and ensuring minimum down-time.

Training & Up-Skilling

Landi's expert teams also offer specialized training programs aimed at up-skilling your in-house operators and technicians in the latest ecomobility technologies and best practices.

We also offer tailor-made courses for your specific vehicles and fleets, up skilling teams to better manage future service needs.

Innovation

Zero emission customization for commercial vehicles

Shaping the future of ecomobility solutions

At Landi, innovation means more than staying ahead — it means building what’s next. With over 70 years of global expertise and a presence at the forefront of clean technology, we specialize in the development of cutting-edge ecomobility solutions that help businesses meet sustainability targets, improve efficiency, and lead the transition to low- and zero-emission transport.

Our team is specialized in customizing powertrains for commercial use, taking standard or non-commercial vehicles and engineering them to meet the specific needs of fleets — from layout and drivability to fuel system integration and functional upgrades. We work closely with OEMs, fleets, and commercial mobility partners to design and deliver solutions that are tailored, practical, and built for tomorrow’s transportation landscape.

Accelerating sustainable solutions

Redefining what's possible in commercial transportation

Product Development & Design

Creating and engineering new components, systems, and solutions — from early concept through to launch — to meet the most advanced ecomobility performance and compliance standards.

Tailored Solutions & Strategy

We partner with businesses to develop custom fuel systems, integration models, and long-term sustainability strategies, ensuring each solution aligns with specific fleet needs and regulatory demands.

Testing, Certification & Guidance

Through deep technical expertise and strong agency relationships, we support clients in navigating emissions regulations, securing required certifications, and launching new products with confidence.

BENEFITS

Define new industry standards

Tailored & customized solutions

Improved adoption & performance

Infrastructure

Inspiring a sustainable eco-legacy

From ground to grid, we help to revolutionize green energy infrastructure

Pioneering the development of sustainable infrastructure, Landi leverages advanced green energy sources like natural gas, biomethane, and hydrogen to empower businesses across industries in achieving their sustainability and emissions targets. Our mission is to enable businesses across sectors to continually surpass their sustainability and emissions objectives, facilitating a seamless transition to cleaner energy alternatives.

By integrating cutting-edge technologies and innovative solutions, we are committed to building robust infrastructure systems that not only support the energy transition but also drive economic and environmental benefits for our clients. Our comprehensive approach ensures that businesses can rely on us to deliver scalable, efficient, and future-focused infrastructure solutions that pave the way for a greener tomorrow.

The backbone of tomorrow's green economy

Landi Infrastructure is designed to energize the future and empower eco-innovation

Refueling Stations (CNG, RNG & H2)

We design and deliver advanced refueling stations for compressed natural gas (CNG), renewable natural gas (RNG), and hydrogen applications.

Whether connected to pipelines or operating in trailer-based off-grid locations, our systems are built for maximum performance, scalability, and uptime.

Biomethane Upgrading Systems

Landi's biogas upgrading systems convert raw biogas into high-purity biomethane through advanced membrane and desulfurisation technology.

Modular and remotely monitored, these systems support renewable energy projects and unlock new sources of clean transportation fuel.

Compression Technology

Our infrastructure is powered by decades of experience in gas compression engineering.

From low- to high-pressure applications, our portfolio includes water-cooled and oil-free compressor systems optimized for injection, storage, distribution, and fueling operations.

Virtual Pipeline & Distribution

We support clean energy deployment in regions without direct pipeline access through trailer-based virtual pipeline systems.

These mobile solutions enable flexible transport and off-grid fuel delivery, extending access to sustainable energy wherever it's needed.

BENEFITS

Scalable operational efficiency

Enhanced emissions reductions

Robust infrastructure innovation

Future-ready adaptation & integration
